WATERSTAIN

Ecologico, facile, sorprendente

L'evoluzione della tecnica di tintura delle pelli nel mondo della calzatura, della conceria, della pelletteria e dell'abbigliamento in pelle.

- Per il calzaturificio significa rifinire la pelle in tempi rapidissimi con una cartella colori aggiornatissima, ottimizzando lo stock delle pelli
- Per la conceria significa semplificare la lavorazione e concentrarsi sul valore aggiunto
- Per la pelletteria e per l'abbigliamento significa articoli di tendenza

Per tutti significa "innovazione".

WATERSTAIN® designa una serie di tinte in forma di creme fluide, presentate in ambiente acquoso, che rivoluzionano l'approccio alla tintura e alla rifinitura di pelli e calzature in crust. Le caratteristiche che si apprezzano immediatamente sono riassumibili in:

- Potere tintoriale
- Morbidezza e naturalezza preservata al pellame trattato
- Solidità generali elevate
- Facilità di applicazione

WATERSTAIN® colours, nella tintura del crust si possono agevolmente applicare a spugna o a tampone per ottenere effetti uniformi o piacevolmente nuvolati. Per una tintura uniforme, utilizzare a rollercoater oppure a spruzzo diluendo con il 30% di HP THINNER e filtrando la miscela prima dell'applicazione. I componenti cerosi ed i coloranti che costituiscono

queste specialità, consentono, oltre all'ottenimento di una tintura profonda ed intensa, anche una ricercata alta reattività alla spazzolatura, cui si aggiungono elevati valori delle solidità generali in particolare la resistenza all'acqua, all'usura e allo sfregamento. L'effetto anilina ottenuto è pulito, scaricato, naturale, attraente, luminoso, tipico della migliore pelle tradizionale toscana a concitura vegetale apprezzata in tutto il mondo.

Le pelli rifinite con WATERSTAIN® si prestano perfettamente a diverse lavorazioni successive per ottenere una vasta gamma di articoli innovativi o moderni effetti moda di qualità e di facile realizzazione.

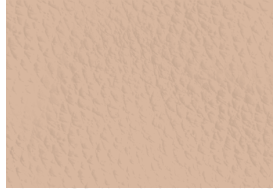

WATERSTAIN® colours, sono disponibili in numerose varianti colore. Il superbo ed attrattivo aspetto finale delle calzature rifinite con le creme tingenti WATERSTAIN® è messo in ulteriore evidenza utilizzando le prestigiose creme della serie VICTORIA CREME®, un presidio vincente nella tecnologia della calzature, sostenuto con passione da Fenice SpA.

Quanto descritto corrisponde alle nostre migliori conoscenze ed esperienze e viene rilasciato senza assunzioni di responsabilità date le notevoli variabili applicative.

Considerate le numerose tipologie di crust esistenti è importante effettuare sempre dei test fisici preventivi come la resistenza allo sfregamento secco-umido, alla goccia d'acqua e alla flessione prima di procedere alla fase produttiva.

WATERSTAIN

Ecological, easy, astonishing

A real evolution in the technological finishing of leathers in the world of: footwear, tanneries, leathergoods manufacturers and garment producers

- For shoe manufacturers, it means enabling rapid speed in finishing leathers with the help of an updated colour chart, efficiently using the leathers in stock
- For tanneries, it means simplifying working operations and concentrating on added value
- For leathergoods and garment manufacturers it means continually creating fashion articles

This means "innovation" for all

WATERSTAIN® consists of a series of fluid cream dyes, presented in a water-based setting that has revolutionized the approach to the dyeing and finishing of crust leathers.

Here is a summary of some of the most immediately appreciated characteristics:

- Dyeing power
- Softness and naturalness to the treated leather
- High general fastnesses
- Easy application

WATERSTAIN® colours can easily be applied by sponge or pad to obtain uniform or slightly 'cloudy' effects. For a uniform application, use by spray or rollercoater diluted with 30% of HP THINNER and filter the mixture before use.

The waxy and colour components with-in this speciality allow for a deep and intense dyeing

power, with a desirable reactivity when brushing, together with good general fastness to leather, such as water resistance, wear resistance and rub fastness.

The aniline effect thus obtained is clean, not overloading, natural, attractive, bright and typical of the best veg-tanned traditional Tuscany leathers that are appreciated worldwide.

Leather finished with WATERSTAIN® are perfectly suitable for the different subsequent operations, enabling a wide range of modern and innovative quality articles to be obtained.

WATERSTAIN® are available in a numerous range of colours. The superlative and attractive final look of footwear finished with WATER-STAIN® dyeing creams can be further enhanced with the prestigious series of the VICTORIA CREME®, another winning aid in footwear technology that is passionately followed by Fenice SpA.

The details are correct to the best of our knowledge and experience. Given the range of variables that may arise in application, however, no responsibility will be accepted.

Due to the wide variety of crust in existence it is very important to always carry out physical tests beforehand, such as wet-dry rub resistance, water-drop resistance and flexing before proceeding in production.

Loving Leather
